

ITpipes Sync

FEATURES & BENEFITS

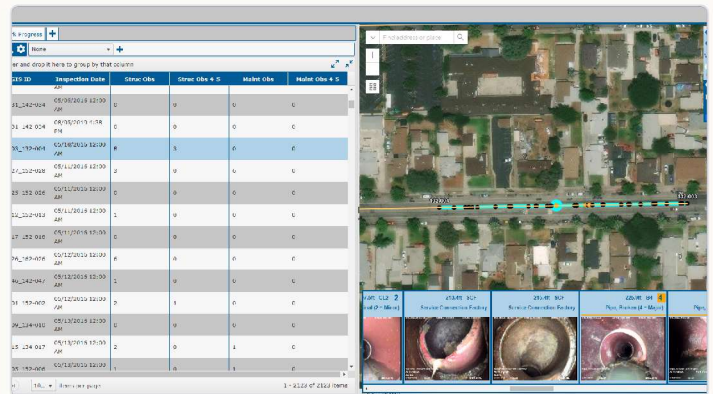

Inspection Access and Reporting, Streamlined

Set it and monitor. *Inspections sync* themselves.

ITpipes Sync eliminates the need to manually merge, upload, and organize your inspections. It automatically merges new inspections from the field into the office for streamlined inspection access and reporting.

CENTRAL Every synced inspection lands in one central project, ready for QA/QC and reporting.

REPORT As inspections sync, corresponding assets are color coded and displayed on the map.

FEATURES & BENEFITS

01

Automate data organization

No more manually merging, transporting hard drives, and uploading. Sync merges new field inspections into the office automatically.

02

Multiple departments and contractors

Deployed for agencies with multiple departments, contractors with multiple projects and clients, and integration into other systems.

03

Automatic information upload

Comprehensive inspection detail uploads on completion for QA/QC and review, with little to no direct involvement after setup.

04

Centralize your inspections

Scheduling and asset details transfer to the inspector; completed work transfers back. Link portable systems to a central project.

05

Boost productivity

Reduce time lost to hard drives and media that get physically misplaced, damaged, or disorganized.

06

Tracking and notifications

A comprehensive audit trail tracks every detail, and email notifications flag any interruption, reducing clean-up and QC effort.

07

Multiple databases supported

Work with sewer and storm, or manhole and culvert databases at once, linking all portable and incoming contractor work.

08

CoreVision dynamic reporting

Unlimited, drill-down filtering and reporting. Assets are color coded on the map as inspections sync in.

AUTOMATE YOUR INSPECTION INTAKE

Tell us how field data reaches your office today. We'll set up Sync in 30 minutes.
